## Your written comments, both positive and negative are welcomed.

Kayden is hands down the best math teacher I've ever had. I always enjoy this class and feel like I'm able to follow everything that's taught. The lectures are fast (as it is summer session) but not so fast that everything falls apart. This is literally the most perfect math class I could've ever taken with the clearest and most passionate teacher I've ever had and if you don't give this man a raise or something so help me I will be very disappointed in you. Kayden deserves it

---

Prof. Mimmack's lecture were straight from the book but in a clear and concise way. He always outlined what we were doing and what was expected. Overall a great professor. One thing he could work on is that he's a bit passive, which students subconsciously see and allows them to forget him as an instructional authority.

---

Kayden has very solid foundation of knowledge on the subject and is very effective at teaching this course. Kayden sets clear objectives and is fair in exams, grading, etc. Also very open to discussion and outside of class consultation. Kayden's approach at explaining concepts is truly helpful and utilizes real life concepts.

---

Loved this course, super kind and understanding professor. One of the best math classes I have taken

---

Fantastic instructor! Clearest math lectures I've seen at UCD, obviously cares about student learning. Approachable and courteous, engages with class, very fair. Challenging and thought-provoking but intuitive concepts.

---

Besides sometimes having bad handwriting, this class was miles better than the other class I had this quarter, magically making linear algebra at 8am sound marginally ok!

---

Very passionate and caring, explanations could be done more in a more layman manner though.

---

Professor Mimmack was very enthusiastic about the course and it's material. The professor had a very good understanding of the subjects being taught, however, it was difficult to keep pace in the note taking as the professor would transition into the next subject too quickly.

---

His lecture is clear. But there are too many note on the class, which may make the lecture unorganized. The solutions for homework just contain final answers without steps, which may be a little bit confused sometimes.

---
